ASUS Local AI Track

Why Local AI Matters

Building local AI solutions is rapidly becoming the gold standard for high-performance computing. Developing locally eliminates cloud latency, guarantees data privacy and security, ensures uninterrupted offline functionality, and significantly reduces operational infrastructure costs. Local AI empowers developers to build faster, highly responsive, and deeply personalized experiences directly where data is created.

Track Overview

In this track, participants will have access to cutting-edge ASUS hardware. To be part of the Local AI track, teams must build on the ASUS Ascent GX10, an ultra-small AI supercomputer based on the NVIDIA DGX Spark. Leverage the power of the NVIDIA® GB10 Grace Blackwell Superchip and 128GB of unified memory to deliver real-time, low-latency experiences without relying on the cloud. Every GX10 will come pre-loaded with NVIDIA Nemotron 3.5 Lightning.

Eligibility & Requirements

To be eligible for track prizes, participating teams must:

- **Develop Locally on Hardware:** Build and demonstrate your project running locally on the ASUS Ascent GX10.
- **Hardware Care:** Return all borrowed hardware in the same condition as received before Closing Ceremony.
- **Provide Feedback:** Complete a brief survey (must be completed before end of judging period) detailing your experience using ASUS local AI hardware.

Judging Criteria

We are searching for standout projects that:

- **Solve Real Problems:** Address meaningful challenges or deliver impactful user experiences.
- **Showcase Innovation:** Display high levels of creativity, technical originality, and novel uses of local hardware acceleration.
- **Demonstrate Value of Local AI:** Show why building and deploying local, on-prem AI can be critical.
- **Inspire & Engage:** Bring utility, joy, or inspiration to end users.

Prizes

- Three (3) winning teams will get to take home ASUS and NVIDIA hardware and swag.

Additional Content Challenge

Calling all content creators, vloggers, and LinkedIn users! We would love to get an inside scoop on your experience throughout this hackathon. Create and share social media content about your experience building for the ASUS Local AI Track on Instagram, TikTok, LinkedIn, or Youtube for a chance to:

- Win an exciting prize! (Prize to be announced at Opening Ceremony)
- Have your content reposted by official ASUS social media accounts

What Content Qualifies?

Your content can be fun, creative, informative—or all three! Here are a few ideas:

🎬 A vlog documenting your 24-hour hackathon experience
💡 A short-form video walking through your project and build
😂 A funny video highlighting your team members and their roles
💼 A LinkedIn post sharing your project, learnings, and hackathon journey
🚀 Any other creative content that captures what it's like to build with the ASUS Local AI Track!

Requirements for Submission:

- Content needs to be public (cannot be private or unlisted)
- Must tag/mention:
  - For IG: @asususa, @hack.dev_ucsc, @baskinengineering
  - For LinkedIn: @ASUS Education, @Hack.dev, @Baskin Engineering at UCSC
  - For TikTok: @asuseducation
  - For YT: @ASUSUSA
- Include the following hashtags:
  - #ASUSEducation
  - #agentcomputer
- Submission form to submit proof of content will also be provided during the hackathon
